TECHNICAL PROJECTS

DC Jam Records: (freelance project, August 2021, dcjamrecords.com)

- Was contracted to build a new front-end for a pre-existing Wordpress site.
- New frontend was built with Gatsby.js (React) and Tailwind CSS.
- Site was deployed via cPanel and integrated with pre-existing Wordpress backend.
- First client project completed for pay, learned about both building sites to client specification and also about Wordpress, cPanel, and Docker (used for testing).

Project: Wayfarer (Bootcamp project, February 2021)

- Project Wayfarer is a simple travel blog built as a full-stack MERN application
- Backend was built using Express.js/Node.js and MongoDB Atlas and deployed to Heroku
- Frontend was built with React and React Router and deployed to Heroku
- Group project on a 4 person team, learned to work on a software product with a large group of people and how to manage a shared codebase with Git

Alex and Tom's Art Blog (Bootcamp Project, January 2021)

- Demo art blog with user authentication, three models, and image uploading to Amazon S3, deployed to Heroku
- MongoDB, Express, Node.js, EJS, Amazon S3, Heroku
- Learned MongoDB Atlas cloud storage, Heroku deployment, and AWS S3 file storage and uploading

EDUCATION

General Assembly: Software Engineering Immersive

University of California, Santa Barbara: English, B.A.
